1. Introduction

1.1 Purpose of the Document

This Business Requirements Document (BRD) defines the business and functional requirements for the development of a dynamic corporate website for Green Art Factory, with primary focus on the backend Admin Dashboard that will allow non-technical staff to manage all dynamic content on the public-facing site without developer involvement.

1.2 Project Background

Green Art Factory requires a dynamic, content-managed website to showcase its projects and products. Currently, updates to project details, product listings, team information, and job openings likely require manual developer intervention. This project introduces a centralized Admin Dashboard so that authorized staff can independently create, update, and publish content across the website, ensuring the site always reflects current work and organizational information.

1.3 Scope of this Document

This document covers business objectives, functional and non-functional requirements, user roles, data relationships (notably the Project-to-Product Gallery linkage), assumptions, constraints, and success criteria for the Admin Dashboard and its connected front-end modules. It does not include visual design (UI/UX mockups), technical architecture, or a detailed cost estimate; these will be addressed in subsequent technical design and proposal documents.

2. Business Objectives

The key business drivers for this project are:

- Enable the marketing/operations team to update the website independently, reducing dependency on developers for routine content changes.
- Maintain a consistent, always-current showcase of completed and ongoing projects to support sales and client presentations.
- Automatically reflect project imagery in the relevant product gallery to eliminate duplicate uploads and reduce content inconsistency.
- Present an accurate, up-to-date 'About Us' page with current employee/team photos and profiles.
- Provide a self-service Careers page to publish openings and manage incoming applications, supporting recruitment efforts.
- Improve overall content governance through role-based access, approval workflow, and audit history.

3. Project Scope

3.1 In Scope

- Secure Admin Dashboard (web-based) with role-based login.
- Project Management module: create/edit/delete projects with photos, descriptions, challenges, solutions, and outcomes.
- Automatic/linked reflection of project images into the corresponding Product Gallery entry.
- Product Gallery management: categories, product details, images, specifications.
- About Us page management: company info, employee/team profiles and photos.
- Careers page management: job posting creation/editing, application/CV submission handling.
- Centralized Media Library for image/document uploads used across modules.
- Basic SEO fields (meta title, meta description, URL slug) per content item.
- Activity log / audit trail for content changes.

4. Stakeholders

Role	Responsibility
Business Owner / Management (Green Art Factory)	Approves requirements, priorities, and final content policies
Marketing / Content Team	Primary day-to-day dashboard users; manage projects, gallery, careers, about us
HR Team	Manages career postings and reviews applications
Super Admin / IT Coordinator	Manages user accounts, roles, and system settings
Development Team	Builds and maintains the dashboard and website per this BRD
Site Visitors / Job Applicants	End users consuming published content and submitting applications

5. Functional Requirements

Requirements are grouped by dashboard module. Priority: H = High (must-have for launch), M = Medium (should-have), L = Low (nice-to-have / future phase).

5.1 User & Role Management

ID	Requirement	Description	Priority
FR-1.1	Secure Login	Admin users log in via email/username and password, with password reset via email.	H
FR-1.2	Role-Based Access Control	System supports roles such as Super Admin, Content Editor, HR Manager, with permissions scoped per module (see Section 8).	H
FR-1.3	User Management	Super Admin can create, edit, deactivate dashboard user accounts.	H
FR-1.4	Activity Log	System records who created/edited/deleted content and when, viewable by Super Admin.	M

5.2 Project Management Module

ID	Requirement	Description	Priority
FR-2.1	Create/Edit/Delete Project	Admin can add a new project with title, category, location/client (optional), completion date, cover image, and gallery images.	H
FR-2.2	Project Description	Rich-text editor field for detailed project description (formatting, bullet points, embedded images).	H
FR-2.3	Challenges & Solutions	Dedicated structured fields to capture 'Challenge Faced' and 'Solution Provided' for each project, displayed on the project detail page.	H
FR-2.4	Multiple Image Upload	Admin can upload multiple images per project and reorder them, with one marked as the cover/featured image.	H
FR-2.5	Publish/Draft Status	Projects can be saved as Draft (not visible on site) or Published (visible on site).	M
FR-2.6	Category / Product Tagging	Each project can be tagged/linked to one or more product categories to enable gallery syncing (see Section 6).	H
FR-2.7	Delete/Archive Project	Admin can archive or delete a project, with a confirmation step and soft-delete/recovery option.	M

5.3 Product Gallery Module

ID	Requirement	Description	Priority
FR-3.1	Product Catalogue Management	Admin can create/edit product entries with name, category, specifications, and description, independent of projects.	H
FR-3.2	Linked Project Images	When a project is tagged to a product/category, its cover image (and selected gallery images) automatically appears in that product's gallery, without re-uploading.	H
FR-3.3	Manual Override	Admin can additionally add standalone product images not tied to any specific project.	M

Note: Section 6 (Data Relationship) describes the recommended technical logic for this Project → Product Gallery synchronization in more detail.

5.4 About Us Page Management

ID	Requirement	Description	Priority
FR-4.1	Company Overview Content	Admin can edit the company description, mission/vision text, and milestones shown on the About Us page.	M
FR-4.2	Employee/Team Management	Admin can add, edit, or remove employee entries, each with photo, name, designation, and short bio.	H
FR-4.3	Reordering Team Members	Admin can control the display order of employees on the front end (e.g., leadership first).	L

5.5 Careers Page Management

ID	Requirement	Description	Priority
FR-5.1	Job Posting Management	Admin/HR can create, edit, publish, or close job openings with title, department, location, type (full-time/part-time), and description.	H
FR-5.2	Application Submission	Site visitors can apply to a job posting by submitting name, contact details, and CV/resume upload.	H
FR-5.3	Application Management	HR can view, filter, download, and update the status of received applications (e.g., New, Shortlisted, Rejected) from the dashboard.	M
FR-5.4	Email Notification	System sends an automatic acknowledgment email to the applicant and/or a notification to HR upon submission.	M

5.6 Media Library

ID	Requirement	Description	Priority
FR-6.1	Centralized Media Uploads	All images/documents uploaded across modules are stored in a shared media library for reuse and management.	M
FR-6.2	Image Optimization	Uploaded images are automatically resized/compressed for optimal web performance.	M

5.7 SEO & Metadata (Optional but Recommended)

ID	Requirement	Description	Priority
FR-7.1	Per-Page SEO Fields	Each project/product/job posting supports editable meta title, meta description, and URL slug.	L

6. Data Relationship: Project ↔ Product Gallery

A core requirement raised is that project photos entered while creating a project should also reflect automatically in the corresponding product gallery. The recommended approach is:

- Each Project record is linked to one or more Product Categories at creation time (e.g., ‘Landscape Design’, ‘Green Wall’, ‘Vertical Garden’).
- When a project is marked Published, its cover image and any images flagged ‘Show in Gallery’ are automatically pulled into the matching Product Gallery page(s).
- This is a one-way, reference-based sync (the image is stored once in the Media Library and referenced by both the Project page and the Product Gallery), avoiding duplicate storage and ensuring that editing or removing the image in one place updates it everywhere it is used.
- If a project is unpublished, archived, or deleted, its images are automatically removed from the linked product gallery view.
- Admin retains the option to exclude specific project images from the gallery sync (e.g., internal/before-work photos).

This eliminates duplicate uploads and keeps the Project pages and Product Gallery visually and factually consistent at all times, directly addressing the requirement that a project image should be reflected in the corresponding product gallery.

7. Non-Functional Requirements

Category	Requirement
Usability	Dashboard must be usable by non-technical staff with minimal training; intuitive navigation and in-context help text.
Performance	Public website pages should load within 3 seconds on standard broadband/4G connections.
Responsiveness	Both the public website and the admin dashboard must be fully responsive across desktop, tablet, and mobile.
Security	Role-based access, encrypted password storage, HTTPS across all pages, protection against common vulnerabilities (SQL injection, XSS, CSRF).
Scalability	System should support growth in number of projects, products, and job postings without redesign.
Backup & Recovery	Regular automated backups of database and media files, with a documented recovery process.
Browser Compatibility	Support latest versions of Chrome, Firefox, Safari, and Edge.
Availability	Target uptime of 99.5% or better for the production website.

8. User Roles & Permission Matrix

Module	Super Admin	Content Editor	HR Manager
User Management	Full Access	No Access	No Access
Project Management	Full Access	Create/Edit/Publish	View Only
Product Gallery	Full Access	Create/Edit/Publish	View Only
About Us / Team	Full Access	Create/Edit/Publish	View Only
Careers - Job Postings	Full Access	View Only	Create/Edit/Publish
Careers - Applications	Full Access	No Access	View/Manage
Media Library	Full Access	Upload/Manage	Upload Only
Settings / SEO	Full Access	Limited	No Access

Note: Roles and permissions above are proposed based on typical needs and should be validated and adjusted with Green Art Factory during requirement sign-off.

9. Assumptions

- Green Art Factory will provide branding assets (logo, brand colors) and initial content (project write-ups, employee bios, job descriptions) for the first content load.
- The website will be primarily in English and Arabic \
- A single Super Admin account will initially be created; additional roles/users will be added post-launch as needed.
- Project-to-product mapping will be based on category tagging rather than a fully automated AI-based image classification.

12. Success Criteria

- Admin team can independently publish a new project (with images, description, challenges, and solutions) without developer support.
 - A published project's image automatically appears in the correct product gallery within the same session, with no duplicate upload required.
 - About Us employee profiles can be added/edited/removed by an authorized admin in under 5 minutes per profile.
 - A new job posting can be published, and an application received, viewed, and status-updated entirely through the dashboard.
 - Zero critical security vulnerabilities identified in pre-launch security testing.
-
